

SYNTHETIC CLINICAL NOTE - FICTIONAL PATIENT - NOT REAL DATA

Patient ID: P001 Request: MRI lumbar spine without contrast

Chief complaint: Persistent low back pain.

HPI: Patient reports low back pain for the past 10 weeks, worse with prolonged sitting. No trauma, fever, or weight loss. No bowel or bladder changes.

Treatment to date: Completed 8 weeks of supervised physiotherapy (twice weekly) with limited improvement. Also taking over-the-counter ibuprofen as needed.

Exam: Mild lumbar paraspinal tenderness. Straight leg raise positive on the right.

Plan: Request lumbar MRI to evaluate for disc pathology.
