

SYNTHETIC CLINICAL NOTE - FICTIONAL PATIENT - NOT REAL DATA

Patient ID: P002 Request: MRI lumbar spine without contrast

Chief complaint: Chronic low back pain.

HPI: Patient describes low back pain lasting 12 weeks with intermittent radiation to the left buttock. No red-flag symptoms reported.

Treatment to date: Attended 8 weeks of physiotherapy focused on core strengthening; pain persists. Uses a heating pad at home.

Exam: Reduced lumbar flexion, no focal neurological deficit.

Plan: Request lumbar MRI to guide further management.
